

## BUSINESS RULES

Customers can have many contracts, but a contract can only have one customer.

Contracts can have many projects, but each project has only one contract.

Projects can only have one Project State at a time.

Projects can have many employees, but each employee has one project

Employees can have one and only one EmployeeType.

Each EmployeeType has one PayType.

## DESCRIPTION:

This database is the framework that a programming company uses for their day to day operations. the database stores Customer Data, Project Data and Employee Data. We are able to see what State a project is in, which employees are assigned to this project, and even pull data such as projected cost using Employee data such as their pay.
